

Task 3 part 1 – Self Evaluation

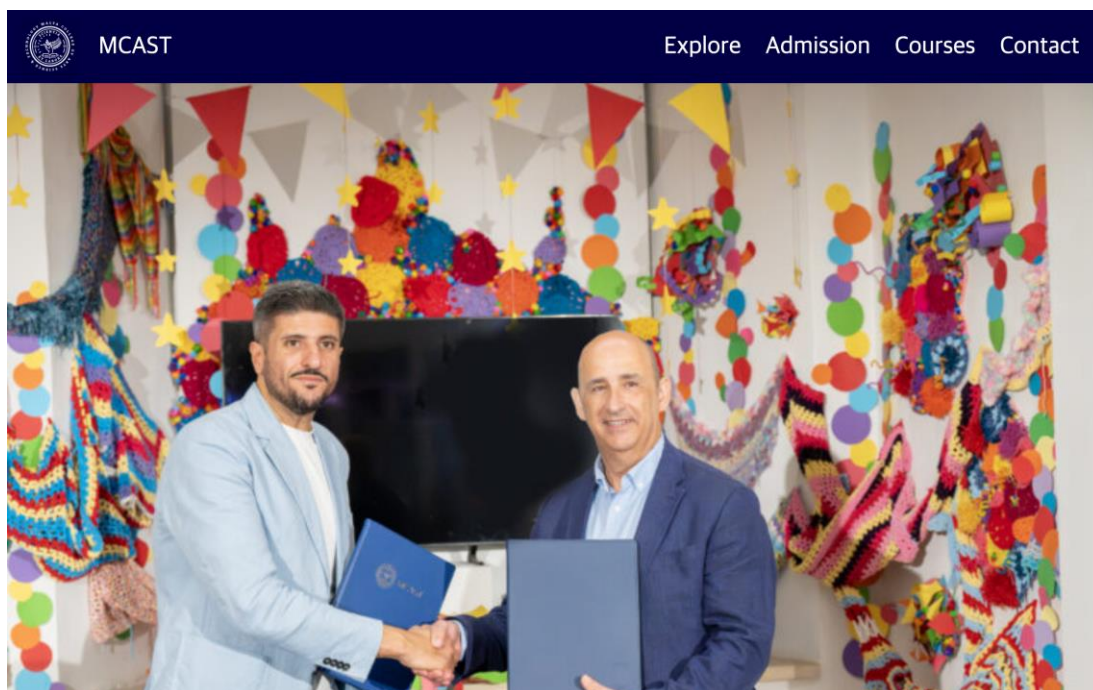

The main changes made to the website were to the design layouts. I tried to keep it simple and clear so that users can navigate to places more easily. Even though the design was simple, hovering affects and pointer was added when pressing on the links in the navigation bar. Components are in order and made sure they don't overlap each other like the original website. While the original website had too much information, I decreased the amount of overall information, however, not every part so that the information needed could be observed.

Some of the strengths of my final solution are simple, modern, and clear. It is straightforward and literal in its wording, so users can get clear information about the things they want to research or understand. They could check the main home page with the picture of the school, read about the school of MCAST in the explore page, go through the steps of the admission and check what are the requirements, check different courses and choose what you want to do, and lastly you can contact the school through implementing your email and asking question. Also when the page size decreases the image and the text size decreases according and does not go out of the margin of the page.

Even though many things were improved, some places could have been better. Such as web page loading when you press the logo image. More pictures of school and events happening could have entertained and given interest to the prospective student. Another page such as admission page entering your details and needs to enter the school could have been efficient. More explanations about each course would have given users more information to understand. For the contact page, not simply contacting any person, but giving different types of emails for different types of situations would have made users contact the right person.

If more time was given, I would have made each page longer and in more detail. I would added different pictures, courses, explanation pages for each courses in detail, and fill in some blank spaces of the pages.

Task 3 part 2 – Before and After comparison

- Simple and clear design with no overlapping components
- Uncomfortable and inconvenient
- Fast navigations for users

Online Applications' Time Windows – MCAST Full-Time Prospectus Courses for Academic Year 2026/2027

Online Applications for Admissions into Academic Year 2026/27 Form A (New) – Applicants residing in Malta having an active and valid EID – Time Window opening on Monday 13th July 2026 at 0800h

 Important Information for Applicants about the Admissions Process and Procedures

How to Apply :

To apply for admission to our programs, please follow these steps:

1. Visit our official website and navigate to the "Admission" section.
2. Complete the online application form with your personal and academic information.
3. Submit the required documents, including your academic transcripts and any other supporting materials.
4. Wait for our review and decision notification.

Admission Requirements :

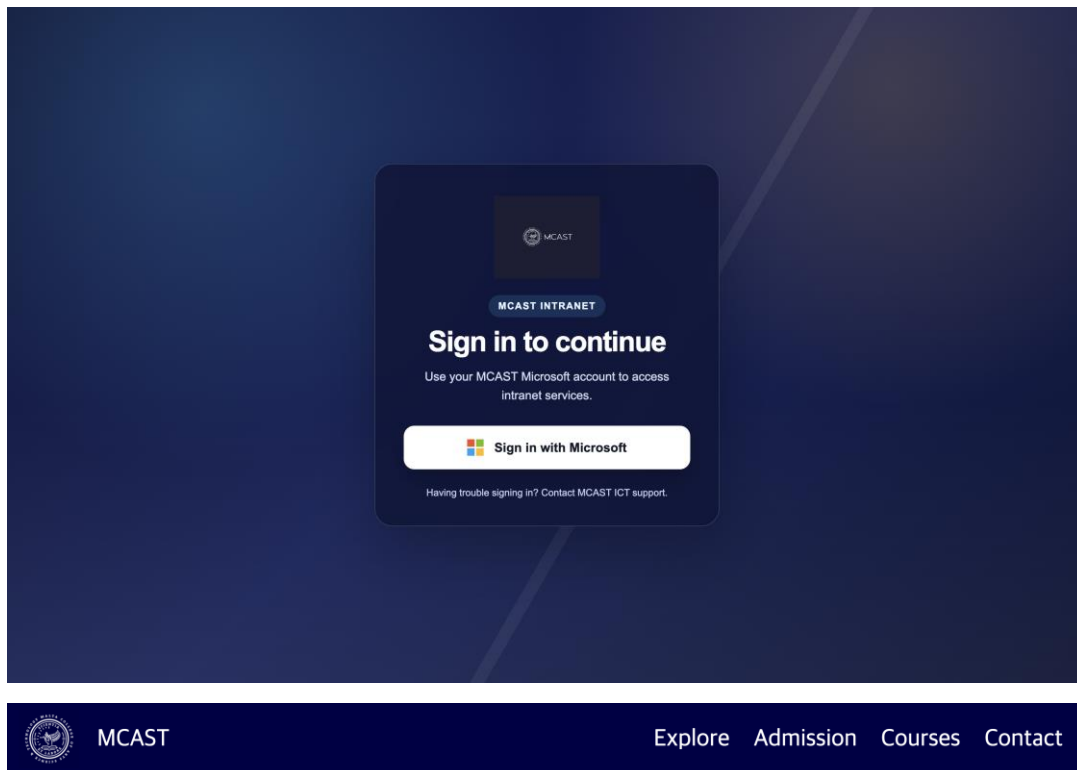

The following are the general admission requirements for our programs:

- Completion of secondary education or equivalent.
- Submission of a portfolio (depending on the program).
- Passing of an entrance examination (if applicable).

[View Our Courses](#)

- Simple instruction and requirements noted
- Too many informations which is unclear what to do
- Easy understanding of requirements and actions needed to do

Question :

- Contact form easy to input your email and question
- You must sign in to microsoft to access
- Fast and convenient to ask questions

Task 3 part 3 – Areas for further Development

Some of the area that I would improve in the further future is the animation when links pressed to give smoother affect. Different images in home page which can be viewed by pressing arrows to next picture. Lastly more design in background, not to fancy but still in style.
